A transaction made as a mistrade may be cancelled by both parties or determined by the trading venue. If a participant or Lykke submitted erroneously an order to the trading venue which is a mistrade, each of them may request that the trading venue review the transaction under these Terms and Conditions. The trading venue shall review the transaction under dispute and determine whether it is clearly erroneous, with a view toward maintaining a fair and orderly market and the protection of investors and the public interest.

Lykke shall not incur any liability as a result of losses sustained by you by reason of such cancellation.

13. RISKS AND PRICE VOLATILITY

You understand and accept the risks in connection with trading of the Products as defined above (see section 3) on Lykke and using the Services as set forth above and hereinafter. In particular, but not limited to, you understand the inherent risks listed hereinafter:

- a) Risk of software weaknesses: You understand and accept that the underlying software application and software platform (i.e. the bitcoin and ethereum blockchain) is still in an early development stage and unproven, why there is no warranty that the Services will be uninterrupted or error-free and why there is an inherent risk that the software could contain weaknesses, vulnerabilities or bugs causing, inter alia, the complete loss of Products.
- b) Regulatory risk: You understand and accept that the blockchain technology allows new forms of interaction and that it is possible that certain jurisdictions will apply existing regulations on, or introduce new regulations addressing, blockchain technology based applications, which may be contrary to the current setup of Lykke and which may, inter alia, result in substantial modifications of the Lykke Services, including its termination.
- c) Risk of loss of private key: Lykke can only be accessed by using the Lykke Trading Wallet with a combination of your Lykke Trading Wallet information (address), private key and password. The private key is encrypted with a password. You understand and accept that if your private key file or password respectively got lost or stolen, the obtained Products associated with your Lykke Trading Wallet (address) or password will be unrecoverable and will be permanently lost.
- d) Risk of theft: You understand and accept that the underlying software application and software platform (i.e. the bitcoin and ethereum blockchain) may be exposed to attacks by hackers or other individuals that could result in theft or loss of the Products.
- e) Risk of mining attacks: You understand and accept that the blockchain used for by Lykke is susceptible to mining attacks, including but not limited to double-spend attacks, majority mining power attacks, "selfish-mining" attacks, and race condition attacks. Any successful attacks present a risk to the Lykke Services.

Lykke cannot and does not guarantee that the transactions in Products will be profitable. You acknowledge and agree that the transactions in Products may be highly volatile (i.e. high volatility may occur during important news events, economic surprises, unusual social events etc.) and that buying and selling Products involves the risk of acquiring rights against an issuer who might not be creditworthy.

14. PUBLIC AND PRIVATE KEY, CUSTODY

When you create a Lykke Trading Wallet, the Services generate and store an encrypted digital private and public key pair that you may use to send buy or sell orders in Products. The public key generated by the Services works as your Lykke Trading Wallet address, and may be shared with the network and with others to complete the Products' transactions. The private key uniquely matches the Lykke Trading Wallet address and must be used in conjunction with the Lykke Trading Wallet address to authorize the transfer of Products from or to that Lykke Trading Wallet address.

The private key is stored on the secured area of your mobile phone encrypted by the password. The private key is also stored as SHA-256 encrypted string at cloud infrastructure, so that you may use multiple devices

or recover Lykke Trading Wallet on another device in case your device is lost or stolen. The private key is encrypted by your password. The password may be temporarily stored encrypted by PIN/TouchID during the opened session. When the session closes due to logging out, or inactivity timeout, or the application is reinstalled, or by demand of the user, or by the action of the Lykke compliance service, you have to login again using your password. The password cannot be recovered. In case you forget your password, you will need to wait until the lock period is over in order to refund your Products.

Lykke does not obtain nor benefit of any legal or beneficial right, title or interest in the Products that you store in your Lykke Trading Wallet. The Lykke Trading Wallet is assigned to a 2-of-2 multisignature address: one signature (private key) is controlled by you and the second signature (private key) is controlled by Lykke. That means that two private keys are needed to buy or sell Products, both yours and Lykke's. Lykke cannot spend your Products without asking for your signature even if Lykke was corrupt or damaged.

You need to make sure that your Products are properly backed up and protected from theft. However, if your private key was stolen, the thief cannot steal the Products without having the private key.

15. DATA PROTECTION
